[REDACTED] (b)(4)

Hi Carol and Catherine, I hope you're doing well! I wanted to follow up on my email below given I know Carol is on [REDACTED] (b)(6) and Catherine was also the day I sent this so it may have gotten lost in the shuffle. Please me know if you have any clarifying questions that I can help answer about the claims below—we'd love CDC's input on them.

[REDACTED] (b)(4)

The related questions and context are listed below. Given there are quite a few, I'm very happy to set up a time to connect and chat through any or all of these if that's easiest for your team—please just let me know! And if your team would like to answer these in chunks, we could start with the first set of questions below related to “all vaccines” and come back to the vaccine related to children claims at a later date.

MANY, MANY thanks in advance for your input into this all!! We look forward to hearing your team's thoughts on these.

All the best,
Liz

Subject: Connecting People in the US With State COVID-19 Vaccine Information

Good morning CDC team,

I wanted to share the latest update for your visibility.

<https://about.fb.com/news/2021/04/state-covid-19-vaccine-information/>

Connecting People in the US With State COVID-19 Vaccine Information

April 12, 2021

Now that states in the US are opening COVID-19 vaccine eligibility to all adults, Facebook is helping connect people with state-specific information from local health departments about COVID-19 vaccines and how people can get vaccinated. To do this, we're replicating our state-by-state strategies we used during the US 2020 presidential election since both voting and the vaccine rollout are handled by state and local authorities. Just as we ran state-specific notifications in News Feed about registering to vote and voting by mail ahead of each state's deadlines, we're tailoring COVID-19 vaccine notifications to coincide with each state opening their eligibility to all adults so we don't promote vaccines before everyone is eligible. We are ultimately rolling out these notifications nationally across the US and globally as more countries expand vaccinations.

Sharing State Vaccine Information in News Feed

As part of our work to help people get vaccinated, we're working with state health departments to connect people with reliable information about whether and when they're eligible to get a COVID-19 vaccine in their state. From January through March, over 3 million people in the US clicked through our News Feed promotions and our COVID-19 Information Center to visit their state health website or local provider. And showing people this information right in their News Feed is having a positive impact on vaccine registrations. For example, West Virginia's Department of Health and Human Resources reported that their vaccine registrations increased significantly after Facebook started running these notifications.

Obtained by America First Legal from the Department of Justice

Over 3 million people in the US have clicked through our News Feed promotions and COVID-19 Information Center to see vaccine eligibility information from their state health website or local provider.

We're also running these News Feed notifications in nearly 20 countries with more following soon. These notifications link to the country's ministry of health website for more information about the vaccines and booking an appointment.

Since [February in the US](#), we've shown people ages 65 and older a notification in News Feed that links to their state website to see who can get a vaccine and how to make an appointment. Now that states are expanding vaccine eligibility, we're starting to show notifications to all eligible adults with the latest information.

When a state says the general public is eligible for a COVID-19 vaccine, we'll show a notification to people in that state that connects them with their state health department or our Vaccine Finder. We're already doing this in states such as Alaska, Mississippi, Texas and Utah. Our strategy to work closely with state governments is critical in order to ensure that our features are directing people to local resources as they are available and not drive demand too soon that would overwhelm systems.

If you have your Facebook language set to Spanish, you'll see the notification in Spanish and we'll direct you to your state's Spanish-language website, if they have one, when you click the link. Right now, we're running these News Feed notifications in 50 US states, the District of Columbia, and five US territories in English, Spanish, Mandarin and Vietnamese. This information, including links to state health departments, is also available in the COVID-19 Information Center.

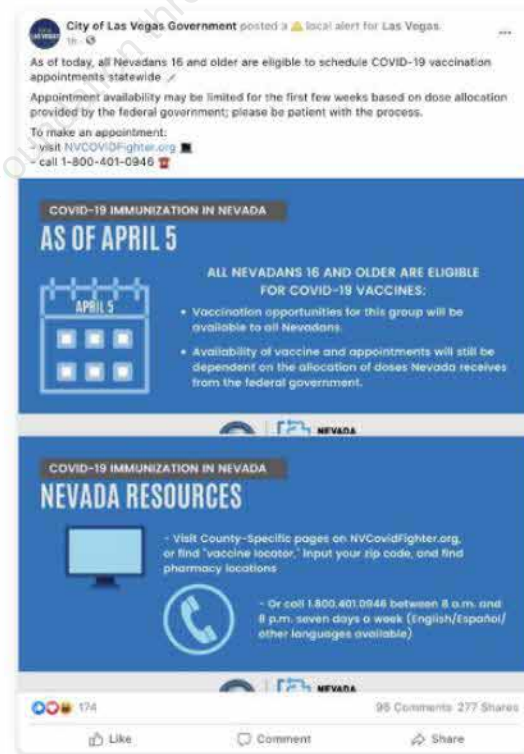

CrowdTangle Partnerships With Health Departments

Over the last month, we've given state health departments access to [CrowdTangle](#) to help address localized vaccine misinformation in a given state or region. CrowdTangle is a Facebook tool that tracks how content spreads online. When health departments flag potential vaccine misinformation on Facebook and Instagram, we review and

remove this content if it violates our policies against false COVID-19 and vaccine claims. This is similar to how governments and fact-checkers use CrowdTangle ahead of elections to identify potential voter suppression.

Expanded Access to Facebook Local Alerts

Over the past year, local governments have been using local alerts, a tool that helps first responders and local governments communicate urgent information to their community on Facebook, to share COVID-19 updates. To help reach people quickly with vaccine information, we expanded access to local alerts to even more municipal governments, state and local emergency response organizations and public health agencies. These groups now have the ability to push out timely, credible COVID-19 and vaccine information to their local communities. *If you meet this criteria, you can request access to [Local Alerts](#).*

Facebook is going to go over information they have "removed" in the past per a request from Jessica Kolis as they wanted the data AND go over the CMU Facebook report from yesterday, so including you guys. I'm not sure this is right for Census but we can invite. It is always hard to know how these meeting will go.

Covid & Vaccine Misinformation

Obtained by America First Legal Foundation through litigation.

- 01 Bringing 50 million people a step closer to vaccinations
- 02 Combating COVID-19 and vaccine misinformation
- 03 Overcoming global challenges in vaccination

Taking a multi-pronged approach to combating COVID-19 and vaccine misinformation

Remove false information that has been debunked by public health experts. Reject ads that violate our policies, including those that discourage vaccination.

Reduce the distribution of other misleading claims rated by independent fact-checkers.

Inform people who have come into contact with these claims through notices and labels and connect them with authoritative information from experts.

Community Standards

Under our Community Standards, we remove misinformation when public health authorities conclude that the information is **false** and **likely to contribute to imminent violence or physical harm**. Since COVID-19 was declared a Public Health Emergency of International Concern (PHEIC) in January 2020, we have applied this policy to content containing claims related to COVID-19 that, according to public health authorities, are (a) false, and (b) likely to contribute to imminent physical harm (of imminent physical harm examples include: increasing the likelihood of exposure to or transmission of the virus, or having adverse effects on the public health system's ability to cope with the pandemic). The goal of this policy is to reduce health harm to people, while also allowing people to discuss, debate and share their personal experiences, opinions and news related to the COVID-19 pandemic.

We Remove

Claims about the **existence or severity of COVID-19**. Acknowledging the existence and understanding the severity of COVID-19 is foundational to keeping people safe and aware of the dangers of this public health emergency. We remove claims that deny the existence of the disease or undermine the severity of COVID-19. This includes:

- Claims that COVID-19 is no more dangerous to people than the common flu or cold.

Claims about **COVID-19 transmission and immunity**: Understanding how COVID-19 is transmitted and who can be infected is a critical component of protecting people from getting or spreading the virus. Public health authorities state that COVID-19 can be transmitted in any location and primarily from person to person through small droplets from the nose or mouth, which are expelled when a person with COVID-19 coughs, sneezes or speaks. Public health authorities also agree that all people, regardless of age or other unique characteristics, can be infected with and spread COVID-19. We remove false claims about how and where COVID-19 can be transmitted and who can be infected. This includes:

- Claims that COVID-19 cannot be transmitted in certain climates, weather conditions, or locations

Claims about **guaranteed cures or prevention methods for COVID-19**: Public health authorities, such as the WHO, say there is currently nothing that can guarantee recovery or guarantee the average person will not get COVID-19. We have also heard from public health authorities that if people thought there was a guaranteed cure or prevention for COVID-19, that could lead them to take incorrect safety measures, ignore appropriate health guidance, or even attempt harmful self-medication. This is why we don't allow false claims about how to cure or prevent COVID-19. This includes:

- Claims that for the average person, something can guarantee prevention from getting COVID-19 or can guarantee recovery from COVID-19 before such a cure or prevention has been approved

Claims **discouraging good health practices**: There are a number of good health practices public health authorities advise people take to protect themselves from getting or spreading COVID-19. This includes wearing a face mask, social distancing, getting tested for COVID-19 and, more recently, getting vaccinated against COVID-19. Public health authorities have issued emergency use authorization for several COVID-19 vaccines, so in addition to false claims about face masks, social distancing and testing, we do not allow false claims about the vaccines or vaccination programs which public health experts have advised us could lead to COVID-19 vaccine rejection. This includes false claims about the safety, efficacy, ingredients, development, existence, or conspiracies related to the vaccine or vaccination program. As more information becomes available about COVID-19 vaccines, we will continue to iterate on how we apply this policy. This includes:

- Claims that COVID-19 tests cause cancer

False Claims about Covid Vaccines

- Claims about the availability or existence of COVID-19 vaccines
- Claims about the safety or serious side effects of COVID-19 vaccines
- Claims about the efficacy of COVID-19 vaccines
- Claims about how the COVID-19 vaccine was developed or its ingredients
- Claims involving conspiracy theories about a COVID-19 vaccine or vaccination program

Obtained by America First Legal Foundation through litigation.

Widely Debunked Vaccine Hoaxes

For the duration of the COVID public health emergency, we remove content that repeats other false health information, primarily about vaccines, that are widely debunked by leading health organizations such as the World Health Organization (WHO) and the Centers for Disease Control and Prevention (CDC). The goal of this policy is to combat misinformation about vaccinations and diseases, which if believed could result in reduced vaccinations and harm public health and safety.

- Vaccines cause autism
- Vaccines cause Sudden Infant Death Syndrome
- Vaccines cause the disease against which they are meant to protect, or cause the person to be more likely to get the disease
- Vaccines or their ingredients are deadly, toxic, poisonous, harmful, or dangerous
- Natural immunity is safer than vaccine acquired immunity
- It is dangerous to get several vaccines in a short period of time, even if that timing is medically recommended
- Vaccines are not effective to prevent the disease against which they purport to protect
- Acquiring measles cannot cause death (requires additional information and/or context)
- Vitamin C is as effective as vaccines in preventing diseases for which vaccines exist.

Repeat Offenders

Pages, Groups, profiles, and Instagram accounts that repeatedly post misinformation or coordinate harm (see Coordinating Harm policies at the top of this entry) related to COVID-19, vaccines, and health may face restrictions, including (but not limited to) reduced distribution, removal from recommendations, or removal from our site.

Obtained by America First Legal Foundation through litigation.

Since the pandemic began, we've removed more than **16 million pieces of content** on Facebook and Instagram for violating our COVID-19 and vaccine policies.

This includes **more 2 million** pieces of content removed since February alone, when we expanded our COVID and vaccine misinformation policies.

Hi Todd –

A quick BOLO for a small but growing area of misinfo. One of our Lab alerts ([CDC 2019-Novel Coronavirus \(2019-nCoV\) Real-Time RT-PCR Diagnostic Panel](#)) was misinterpreted and was shared via social media. The CDC issued a [follow-up Laboratory Alert](#) to provide further

clarification and prevent additional confusion but we are still seeing some social media circulation. The CDC 2019 Novel Coronavirus (2019-nCoV) Real-Time RT-PCR Diagnostic Panel did not fail a full review and was not revoked by the FDA. I've attached some example Twitter posts and another document with the facts around the issue.

Let us know if you have any questions!

Thanks!

I'm sorry this has been in my draft all day!!

This looks good. Thanks for checking.

Yes, we can discuss the pediatric vaccines early next week but let me give you some general info: ACIP is likely to vote on this on Nov 2. CDC is likely to start posting final information on Nov 3 (possibly late Nov 2), if that helps to know. There will be many updates so the changes might span over a few days. We are also looking ahead and misinformation and hope to have a BOLO type meeting later that week with platforms that are interested.

Subject: Re: Booster Shots

Hi CDC team,

Stanley's OOO so I'm also adding +Megan Ryskamp who is helping while he is out. Given that CDC booster [guidance](#) has changed, we wanted to raise awareness of this upcoming change to our product experience. Please see below for our new text and a mock up and let us know if you have any feedback.

Anticipated new text: (b)(4)
(b)(4)

(b)(4)

Also, do you have time to connect early next week on the anticipated guidance on vaccines for 5-11? It would be great to connect as the CDC plans communications on authoritative information for pediatric vaccines.

Thank you,
Jan and Megan

Thank you so much Kelsey,

Feel free to set a tentative launch date of Tuesday 1/26 @12p, but we're working to try to get going even earlier if you're aligned, given the urgency of the messaging.

We're having trouble locating this campaign ID on our end however, is this still within ad account (b)(4) or are you working from a different ad account on this one? If you are able to share a screenshot of the campaign in ads manager and the corresponding url link to the screen you're viewing the campaign from that could be helpful as well.

Thank you,

Good morning Kelsey,

Hope the holiday weekend went well, confirming that we are good to go on our own end.

Our team is going to begin setting up the study. Would you all be able to begin structuring the campaign *without launching* and provide the corresponding campaign IDs so we can append measurement?

Please note, it is important that the campaign *not* be launched/active prior to launching the study as this allows us to set a holdout.

Subject: Re: RE: Brandlift

Hi Kelsey,

Ultimately, it would depend on a number of factors around the campaign including creative, placements, optimizations etc but (b)(4) is typically the minimum bound we see for tests like this one. At (b)(4) you can reliably reach at least (b)(4) people over 2/3 weeks, which is sufficient for this test, and with (b)(4) you should be able to reach over (b)(4) people over this same time period. Please let us know if this makes sense.

(b)(6)

Subject: Re: RE: Brandlift

Hi Kelsey,

We're working through getting approvals on our end as well but if everything goes through on both ends, then we would need to launch the test *before* you launch any media so that our measurement team can set holdout groups. a 2–4 week test period works well, but what is also important here is actually the overall expected reach of the campaign. This is partially determined by factors such as audience size, objective, creative, and budget. Do you have a sense of how much budget you'd want to put behind this campaign/test?

Subject: Re: RE: Brandlift

Hi Kelsey,

Thank you for putting this together – very helpful and it should work well. Two more technical notes to keep in mind on this end before we're good to go with the questions.

- The answers to the knowledge question do have a technical limitation of 50-characters, so where possible it'd be helpful to condense or think through alternative knowledge statements. I included the answers below along with demarcations of where the character limit would currently cut off in red.
- We will ultimately be able to select 3 polling questions including Ad Recall, if you get a chance we'd love to also get a sense of how you'd rank each of these selected polls as they align with your learning objectives so we have a good sense of how to prioritize.

Hi Airton,

For the Brandlift, we would like to find out what knowledge is gained from our messaging and how likely someone is to practice the behavior (wearing a mask) after seeing our messaging. Overall, we want this project to help us determine if our campaign is working and where adjustments should be made.

Thanks,
Kelsey

Thank you so much Kelsey,

Feel free to set a tentative launch date of Tuesday 1/26 @12p, but we're working to try to get going even earlier if you're aligned, given the urgency of the messaging.

We're having trouble locating this campaign ID on our end however, is this still within ad account (b)(4) or are you working from a different ad account on this one? If you are able to share a screenshot of the campaign in ads manager and the corresponding url link to the screen you're viewing the campaign from that could be helpful as well.

Thank you,

Good morning Kelsey,

Hope the holiday weekend went well, confirming that we are good to go on our own end. Our team is going to begin setting up the study. Would you all be able to begin structuring the campaign *without launching* and provide the corresponding campaign IDs so we can append measurement?

Please note, it is important that the campaign *not* be launched/active prior to launching the study as this allows us to set a holdout.

Thank you all for the endless push!! I believe we have what we need for next steps on our end.

And wow, Carol... that is incredible that you had to sit through that training!! Definitely brings back some memories. ☐ THANK YOU for running all the traps internally.

We will follow up if we need anything more. We have to put this through a few approvals on our end, and will follow up. Shouldn't take too long but we will keep you posted on timing.

Thanks,
Julia

Julia can probably appreciate this as she worked in HHS once. It took me some time to get it cleared, including a 8 hour training class I had to complete. I just let Kelsey know its cleared so I know she will be in touch shortly. Also, for your reference, now that I have gone through this process once, clearance on our end will go much faster the next time!

Subject: Re: RE: Brandlift

Hi Kelsey,

Ultimately, it would depend on a number of factors around the campaign including creative, placements, optimizations etc but (b)(4) is typically the minimum bound we see for tests like this one. At (b)(4) you can reliably reach at least (b)(4) people over 2/3 weeks, which is sufficient for this test, and with (b)(4) you should be able to reach over (b)(4) people over this same time period. Please let us know if this makes sense.

Best,
-Airton

Subject: Re: RE: Brandlift

Hi Kelsey,

We're working through getting approvals on our end as well but if everything goes through on both ends, then we would need to launch the test *before* you launch any media so that our measurement team can set holdout groups. a 2-4 week test period works well, but what is also important here is actually the overall expected reach of the campaign. This is partially determined by factors such as audience size, objective, creative, and budget. Do you have a sense of how much budget you'd want to put behind this campaign/test?

Best,
Airton

Subject: RE: RE: Brandlift

Hi Airton,
I am still waiting on CDC clearance of the polling questions, but in the meantime we are drafting a schedule for these posts. Once we have approval, would we start running the ads and your team starts using the polling questions or will you wait a few days to start the questions? We propose running the ads for 2-4 weeks. Does your team have a preference based on past projects like this?

Thanks,
Kelsey

Subject: Re: RE: Brandlift

Hi Kelsey,

Thank you for putting this together – very helpful and it should work well. Two more technical notes to keep in mind on this end before we're good to go with the questions.

- The answers to the knowledge question do have a technical limitation of 50-characters, so where possible it'd be helpful to condense or think through alternative knowledge statements. I included the answers below along with demarcations of where the character limit would currently cut off in red.
- We will ultimately be able to select 3 polling questions including Ad Recall, if you get a chance we'd love to also get a sense of how you'd rank each of these selected polls as they align with your learning objectives so we have a good sense of how to prioritize.

Hi team!

Adding my colleague Mike Sullivan to this email in advance of our call today who is our marketing science expert. I also wanted to share our Covid planning guide for review so you can see how many of our health partners are thinking about brand lift for covid/health specifically. Again, this was developed in collaboration with our health partnerships team in an effort to track with the KAP model.

Looking forward to chatting shortly,
Julia

Hi Julia –

The following times work for me.

- Tuesday 10-11:30am
- Tuesday 4-5pm
- Thurs: 1-2pm (but I have a hard stop at 2pm)

Hallie & Carol are you available at any of those times?

Thanks,
Kelsey

Hi Kelsey,

Here are a few times that work for us:

- Tuesday 10-11:30, 3-3:30, 4-5pm
- Wednesday: 9-10:30am
- Thurs: 10-11:30, 1-2pm

Let me know if any of the times work on your side!

Thanks,
Julia

Carol and team,
My apologies for not following up sooner, it's been a crazy week!

We talked about scheduling a follow-up call to talk specifics with our measurement lead, and here are a few times that work on our side:

- Friday (tomorrow) 2:30-3:30
- Monday 11:30-2pm

Let me know if you need more options!

Best,
Julia

Thanks for the note on this Carol as well as the flag about the Anti-vax event. We will follow up on both separately.

For the meeting today, I wanted to flag that we will have the research team/CMU survey conversation loaded the first half hour given then may be most of the dialogue. Then we can touch on the other items...WA further questions etc.

Best,

Payton

From: Carol Crawford (b)(6)
Date: Wednesday, March 17, 2021 at 1:00 PM
To: Payton Iheme (b)(6)
Cc: Chelsey Lepage (b)(6)
Subject: Census & Misinfo project

Payton – As we've discussed for many weeks now, Census is now officially on board to start the work with us on vaccine mis-info. We'd like to start up the regular meetings, like what Census had with Facebook previously, to discuss ongoing misinformation. What is the best method for setting something up? I did invite Sam and Jen from Census to listen to tomorrow's meeting as it will be good info, but I think this a separate, ongoing, more tactical meeting on misinfo.

Also, on a separate but similar issue, are you all seeing a lot about a major anti-vaccine event on March 20 using this hashtag? And if so, anything you think we should know?

#wewillALLbethere

Thanks!

Just FYI, we have a great deal of new content posted. Also, some new info on myths your misinfo folks might be interested in.

- **New web page:** [COVID-19 Vaccines for Children and Teens](#) provides information about the benefits of COVID-19 vaccines for adolescents aged 12 and older, how to find a vaccination provider for adolescents, and what to expect during and after vaccination.

- **New fact sheet:** [COVID-19 Vaccines for Preteens and Teens](#) is a printable fact sheet for parents that explains the benefits of a COVID-19 vaccine for their children, safety information, and what to expect during and after vaccination. **New frequently asked questions:** Two [new FAQs](#) address questions about the safety and benefits of COVID-19 vaccination for adolescents aged 12 and older.
- **New myth-buster about menstrual cycles:** Your menstrual cycle *cannot* be affected by being near someone who received a COVID-19 vaccine. This [question and answer](#) explains why.
- **Myth-buster about infertility:** It is safe for people who would like to have a baby one day to get a COVID-19 vaccine. This [question and answer](#) explains why.
- **Key things to know:** The web pages [Key Things to Know about COVID-19 Vaccines](#) and [About COVID-19 Vaccines](#) have been updated to include the recommendation that adolescents aged 12 and older get vaccinated.

Information for Healthcare and Vaccine Providers

- **New pediatric toolkit:** The [Pediatric Healthcare Professionals COVID-19 Vaccination Toolkit](#) provides materials to help healthcare providers give parents clear and accurate information about COVID-19 vaccines. The toolkit includes answers to common questions, an explanation of how mRNA vaccines work, and printable materials to give to parents.
- **New FAQs about consent for minors:** [FAQs](#) have been posted on the Pfizer-BioNTech product page for providers with information about consent, prescreening questions, and other issues related to the vaccination of minors.
- **New sample patient letter:** Healthcare providers can customize and send this [sample letter](#) to encourage their patients to get a COVID-19 vaccine. It includes the new recommendation that everyone aged 12 and up get a COVID-19 vaccination.

Information for Community Groups and Health Departments

Toolkit for community-based organizations: The [Community-Based Organizations COVID-19 Vaccine Toolkit](#) has been updated to include information and resources on COVID-19 vaccination for adolescents aged 12 and older.

Subject: COVID Misinfo project

Stanley/Jan– As I believe we discussed previously, CDC is now working with Census to leverage some of their infrastructure to help identify and address COVID vaccine mis-info. As I understand it from the Census team.... when they were doing this for the Census project last year, they meet regularly with a Google/YouTube Trust team. Is it possible for us to start up regular meetings on this topic or maybe use our existing meeting time. Let me know if you want to discuss in more depth.

I'm still checking on the treatment issue.

Thanks!

Subject: COVID-19 Outreach to communities worldwide

Good afternoon Carol, Jay, and Kathleen,

We wanted to make sure you saw our announcements today about running the largest worldwide campaign to promote authoritative COVID-19 vaccine information and expanding our efforts to remove

false claims on Facebook and Instagram about COVID-19, COVID-19 vaccines and vaccines in general during the pandemic. More details are in our Newsroom: [authoritative COVID-19 vaccine information](#) and [COVID-19 and vaccine misinformation](#).

Helping People Find Where and When They Can Get Vaccinated

- Starting this week, we'll feature links in the COVID-19 Information Center to local ministry of health websites to help people understand whether they're eligible to get vaccinated and how to do so.
- And in the coming weeks, as more information becomes available, we'll continue to improve this feature, making it easier for people to see where and when they can get vaccinated in just a few taps.

Sharing Credible Information About COVID-19 Vaccines

- We're working with health organizations and community leaders to run campaigns on our platform promoting accurate information about COVID-19 vaccines and encouraging people to get vaccinated.
- We're giving over \$120 million in ad credits to help health ministries, NGOs and UN agencies reach billions of people around the world with COVID-19 vaccine and preventive health information.
- In the US, we're partnering with the Johns Hopkins Bloomberg School of Public Health to reach Native American communities, Black communities and Latinx communities, among others, with science and evidence-based content that addresses the questions and concerns these communities have.
- We're also working with AARP to reach Americans over 50 with educational content about COVID-19 vaccines, including Spanish-language content designed to reach Latinx and Hispanic communities.

Combating Vaccine Misinformation

- We are expanding our efforts to remove false claims on Facebook and Instagram about COVID-19, COVID-19 vaccines and vaccines in general during the pandemic. Since December, we've [removed false claims](#) about COVID-19 vaccines that have been debunked by public health experts.
- Today, following consultations with leading health organizations, including the [World Health Organization \(WHO\)](#), we are expanding the list of false claims we will remove to include additional debunked claims about the coronavirus and vaccines. We already [prohibit these claims](#) in ads.
- Groups, Pages and accounts on Facebook and Instagram that repeatedly share these debunked claims may be removed altogether. We are also requiring some admins for groups with admins or members who have violated our COVID-19 policies to temporarily approve all posts within their group.
- When people search for vaccine or COVID-19 related content on Facebook, we promote relevant, authoritative results and provide third-party resources to connect people to expert information about vaccines. On Instagram, in addition to surfacing authoritative results in Search, in the coming weeks we're making it harder to find accounts in search that discourage people from getting vaccinated.

- [As we noted last month](#) in response to guidance from the Oversight Board, we are committed to providing more transparency around these policies. You can read the detailed updates in Facebook's [Community Standards](#) and in our [Help Center](#).

Providing Data to Inform Effective Vaccine Delivery

- Last year, we began collaborating with Carnegie Mellon University Delphi Research Group and the University of Maryland on COVID-19 surveys about symptoms people are experiencing, mask wearing behaviors and access to care. With over 50 million responses to date, the survey program is one of the largest ever conducted and has helped health researchers better monitor and forecast the spread of COVID-19.
- To help guide the effective delivery of COVID-19 vaccines, the survey data will provide a better understanding of [trends in vaccine intent](#) across sociodemographics, race, geography and more. The scale of the survey will also allow for faster updates on changes in trends, such as whether vaccine intent is going up or down in California in a given week and better insights on how vaccine intent varies at a local level. We'll share these new insights including [vaccine attitudes at a county level](#) in the US as well as [globally](#).

These new policies and programs will help us continue to take aggressive action against misinformation about COVID-19 and vaccines and help people find where and when they can get vaccinated. You can read more about how we're supporting COVID-19 relief efforts and keeping people informed at our [COVID-19 action page](#).

Subject: RE: Crowd Tangle COVID-19 reports for WHO

Sorry my delay in response, I overlooked this yesterday. It looks wonderful and much appreciated. For now, send to me but I will be extending our distribution list.

One group we'll be adding is the Census group who hopefully will soon start their project with us. (Did you by chance talk to them yesterday? As this just came up with them yesterday?). Also, the wide group of those looking at misinfo will want this.

THANK you! I will let you know if there is additional feedback.

Subject: Crowd Tangle COVID-19 reports for WHO

Hi Carol,

I am following up on our conversation several weeks ago about providing more detailed reporting from our CrowdTangle team. I wanted to share our first CrowdTangle COVID content report with you courtesy of Lauren and Kelly on the cc. They are providing these to WHO, and thought it helpful for CDC teams as well. This report covers the time period of Jan 1 to January 14th. Going forward, these reports will be developed bi-weekly, with the next one ready for delivery on February 1. Who would you like these sent to?

Lauren can do that distro and just put you/Jay, me, and Priya on cc if that works. But you let us know what you are thinking and if you want to distribute.

The full report is attached, but some highlights the CrowdTangle team would like to call to your attention are:

We've included links to the searches we used to develop these insights in the report, but please let us know if you or anyone on your team has trouble accessing these searches. And of course, we welcome your feedback on the report's content, template and any other areas that might makes these most effective for your team.

Thank you,
Payton, Lauren and team

Hi Carol,

I am following up on our conversation several weeks ago about providing more detailed reporting from our CrowdTangle team. I wanted to share our first CrowdTangle COVID content report with you courtesy of Lauren and Kelly on the cc. They are providing these to WHO, and thought it helpful for CDC teams as well. This report covers the time period of Jan 1 to January 14th. Going forward, these reports will be

developed bi-weekly, with the next one ready for delivery on February 1. Who would you like these sent to?

Lauren can do that distro and just put you/Jay, me, and Priya on cc if that works. But you let us know what you are thinking and if you want to distribute.

The full report is attached, but some highlights the CrowdTangle team would like to call to your attention are:

We've included links to the searches we used to develop these insights in the report, but please let us know if you or anyone on your team has trouble accessing these searches. And of course, we welcome your feedback on the report's content, template and any other areas that might makes these most effective for your team.

Thank you,
Payton, Lauren and team

Sorry my delay in response, I overlooked this yesterday. It looks wonderful and much appreciated. For now, send to me but I will be extending our distribution list.

One group we'll be adding is the Census group who hopefully will soon start their project with us. (Did you by chance talk to them yesterday? As this just came up with them yesterday?). Also, the wide group of those looking at misinfo will want this.

THANK you! I will let you know if there is additional feedback.

Subject: RE: Crowd Tangle COVID-19 reports for WHO

Sorry my delay in response, I overlooked this yesterday. It looks wonderful and much appreciated. For now, send to me but I will be extending our distribution list.

One group we'll be adding is the Census group who hopefully will soon start their project with us. (Did you by chance talk to them yesterday? As this just came up with them yesterday?). Also, the wide group of those looking at misinfo will want this.

THANK you! I will let you know if there is additional feedback.

Subject: Crowd Tangle COVID-19 reports for WHO

Hi Carol,

I am following up on our conversation several weeks ago about providing more detailed reporting from our CrowdTangle team. I wanted to share our first CrowdTangle COVID content report with you courtesy of Lauren and Kelly on the cc. They are providing these to WHO, and thought it helpful for CDC teams as well. This report covers the time period of Jan 1 to January 14th. Going forward, these reports will be developed bi-weekly, with the next one ready for delivery on February 1. Who would you like these sent to?

Lauren can do that distro and just put you/Jay, me, and Priya on cc if that works. But you let us know what you are thinking and if you want to distribute.

The full report is attached, but some highlights the CrowdTangle team would like to call to your attention are:

(b)(4)

We've included links to the searches we used to develop these insights in the report, but please let us know if you or anyone on your team has trouble accessing these searches. And of course, we welcome your feedback on the report's content, template and any other areas that might makes these most effective for your team.

Thank you,
Payton, Lauren and team

Hi Carol,

Attaching the latest CrowdTangle content insights report for the period of May 19-June 1 (attached). I wanted to note that Tyler Woods (cc'ed) is taking over the oversight for these reports, and will be providing them to you going forward. Here's the quick summary from this report:

(b)(4)

Let us know if you have any questions or particular keywords/topics you'd like us to explore for the next report.

Thanks,
Kelly

Sorry my delay in response, I overlooked this yesterday. It looks wonderful and much appreciated. For now, send to me but I will be extending our distribution list.

One group we'll be adding is the Census group who hopefully will soon start their project with us. (Did you by chance talk to them yesterday? As this just came up with them yesterday?). Also, the wide group of those looking at misinfo will want this.

THANK you! I will let you know if there is additional feedback.

(b)(6)
Subject: Crowd Tangle COVID-19 reports for WHO

Hi Carol,

I am following up on our conversation several weeks ago about providing more detailed reporting from our CrowdTangle team. I wanted to share our first CrowdTangle COVID content report with you courtesy of Lauren and Kelly on the cc. They are providing these to WHO, and thought it helpful for CDC teams as well. This report covers the time period of Jan 1 to January 14th. **Going forward, these reports will be developed bi-weekly, with the next one ready for delivery on February 1. Who would you like these sent to?**

Lauren can do that distro and just put you/Jay, me, and Priya on cc if that works. But you let us know what you are thinking and if you want to distribute.

The full report is attached, but some highlights the CrowdTangle team would like to call to your attention are:

We've included links to the searches we used to develop these insights in the report, but please let us know if you or anyone on your team has trouble accessing these searches. And of course, we welcome your feedback on the report's content, template and any other areas that might makes these most effective for your team.

Thank you,
Payton, Lauren and team

Subject: DHS/CISA or Census Bureau and COVID-19 misinfo ?

Hi and good morning Carol,

I saw that DHS/CISA is planning /possibly working on COVID-19 misinfo concerns.

Are you aware of that aspect?

I also know that you said things are still be routed on trying to do something on this topic with the Census Bureau. There is quite a bit of focus on misinfo and it's growing among members of Congress etc. as now the focus is turning to vaccination misinfo.

(b)(4)

I wanted to send along another note on this topic before too much time goes by and see if discussions have developed more on your end with Census or CISA.

Best,

Payton

Hi Todd – Just wanted to check back on this to see if you had thoughts?

From: Crawford, Carol Y. (CDC/OD/OADC)
Sent: Friday, November 5, 2021 9:31 AM
To: Todd O'Boyle (b)(6)
Subject: Discuss VAERS Misinformation with a CDC expert?

Todd – As you probably are aware, people citing CDC VAERS data incorrectly is a major source of misinformation about COVID. One of our experts on the VAERS system has already briefed another tech platform to answer some of their policy team questions. Would Twitter be interested in short 30 minute briefing & Q/A on the topic? If so, would this Wednesday at 4pm EST work? Also, how would you feel if other tech platforms were on the line? Unlike the previous BOLO meetings, we would like to open the line for exchange.

Thanks!

Example tweet:

⚠️ [#VAERS](#) Study performed by a statistician PhD student: vaccination death rate has risen up to 5427% after covid genetic injection, compared to all other vaccines together !!
[#vaccination](#) [#COVID19](#)

Liz – Below is some details from the team. I know it is a lot, does it give you what you need? In terms of the global database question at the end, I included some VAERS background below. This page adds

more context: [Selected Adverse Events Reported after COVID-19 Vaccination | CDC](#). But I wasn't able to obtain recommended database.

Let me know if this doesn't work!

Spike protein in COVID-19 vaccines is dangerous/cytotoxic

Messenger RNA (mRNA) vaccine are one type of COVID-19 vaccine. Messenger mRNA vaccines work by teaching our cells to create a **harmless spike protein**. Spike proteins are ideal targets for vaccines. If you are exposed to the real COVID-19 virus after receiving a mRNA vaccination, your body will recognize it and fight it off by triggering an immune response inside your body. The cell breaks down and gets rid of the mRNA soon after it is finished using the instructions.

mRNA vaccines cannot give someone the virus because they do not use the live virus that causes COVID-19. The mRNA vaccine does not interact with your DNA in any way. The mRNA never enters the nucleus of the cell where the DNA is kept. mRNA vaccines have been held to the same [rigorous safety and effectiveness standards](#) as all other types of vaccines in the United States. Researchers have been studying and working with mRNA vaccines for decades. RNA vaccines have been studied before for flu, Zika, rabies, and cytomegalovirus (CMV).

Provide link to graphic. [How mRNA COVID-19 Vaccines Work \(cdc.gov\)](#)

Guillain-Barre Syndrome (GBS) is a possible side effect of the COVID vaccine

The Centers for Disease Control and Prevention (CDC) and the Food and Drug Administration (FDA) are monitoring reports of [Guillain-Barré Syndrome](#) (GBS) in people who have received the J&J/Janssen COVID-19 Vaccine.

GBS is a rare disorder where the body's immune system damages nerve cells, causing muscle weakness and sometimes paralysis. Most people fully recover from GBS, but some have permanent nerve damage.

After 12.8 million J&J/Janssen COVID-19 Vaccine doses administered, there have been around 100 preliminary reports of GBS identified in VAERS as of July 12. These cases have largely been reported about 2 weeks after vaccination and mostly in men, many 50 years and older. CDC will continue to monitor for and evaluate reports of GBS occurring after COVID-19 vaccination and will share more information as it becomes available.

Recent data indicates thousands of hospitalizations are estimated to be prevented as a result of J&J/Janssen COVID-19 vaccination. The benefits of using the J&J/Janssen COVID-19 vaccine under the Food and Drug Administration's (FDA) Emergency Use Authorization (EUA) clearly outweigh the risks of GBS.

Heart inflammation is a possible side effect of all COVID-19 vaccines (including non mRNA vaccines)

- Myocarditis is inflammation of the heart muscle, and pericarditis is inflammation of the outer lining of the heart. In both cases, the body's immune system causes inflammation in response to an infection or some other trigger.
- More than 177 million people have received at least one dose of COVID-19 vaccine in the United States, and CDC continues to monitor the safety of COVID-19 vaccines for any health problems that happen after vaccination.
- Since April 2021, there have been more than a thousand reports to the Vaccine Adverse Event Reporting System (VAERS) of cases of inflammation of the heart—called myocarditis and pericarditis—happening after mRNA COVID-19 vaccination (i.e., Pfizer-BioNTech, Moderna) in the United States.
- These reports are rare, given the hundreds of millions of vaccine doses administered, and have been reported after mRNA COVID-19 vaccination, particularly in adolescents and young adults.
- CDC and its partners are actively monitoring these reports, by reviewing data and medical records, to learn more about what happened and to understand any relationship to COVID-19 vaccination.
- Most patients who received care responded well to treatment and rest and quickly felt better.
- Confirmed cases have occurred:
 - Mostly in male adolescents and young adults age 16 years or older
 - More often after getting the second dose than after the first dose of one of these two mRNA COVID-19 vaccines
 - Typically within several days after COVID-19 vaccination
 - Patients can usually return to their normal daily activities after their symptoms improve. They should speak with their doctor about return to exercise or sports.

Most patients who received care responded well to treatment and rest and quickly felt better. CDC continues to recommend COVID-19 vaccination for everyone 12 years of age and older, given the risk of COVID-19 illness and related, possibly severe complications. Getting vaccinated is the best way to protect yourself and your family from COVID-19. More information will be shared as it becomes available.

Global source of truth/database for vaccine adverse effects including possibly vaccine-related deaths: VAERS is a passive reporting system, meaning it relies on people sending in reports of their experiences after vaccination. The information is not submitted in real time. Also, VAERS is not designed to determine if a vaccine caused or contributed to an adverse event, such as death. A report to VAERS does not mean the vaccine caused the event. Reports of deaths following COVID-19 vaccination that are reported to VAERS are extracted and posted for transparency. Under EUA, healthcare providers are required to report any of the following (it also has the disclaimer they that have to report events regardless if the reporter thinks the vaccine caused it):

“Healthcare providers are required to report to VAERS the following adverse events after COVID-19 vaccination [under Emergency Use Authorization (EUA)], and other adverse events if later revised by FDA:

- Vaccine administration errors, whether or not associated with an adverse event (AE)
- Serious AEs regardless if the reporter thinks the vaccine caused the AE. Serious AEs per FDA are defined as:
 1. Death;

2. A life-threatening AE;
 3. Inpatient hospitalization or prolongation of existing hospitalization;
 4. A persistent or significant incapacity or substantial disruption of the ability to conduct normal life functions;
 5. A congenital anomaly/birth defect;
 6. An important medical event that based on appropriate medical judgement may jeopardize the individual and may require medical or surgical intervention to prevent one of the outcomes listed above.
- Cases of Multisystem Inflammatory Syndrome
 - Cases of COVID-19 that result in hospitalization or death

Healthcare providers are encouraged to report to VAERS any additional clinically significant AEs following vaccination, even if they are not sure the vaccine caused the event.”

Cc: Jan Antonaros (b)(6)

Subject: Re: Follow up on mis-info conversation

Hi Carol,

Thanks again for your time this week. Attached are some of the claims we discussed for your reference. On a separate but related note, would you happen to know if the CDC has statistics on hospitalization or death for people in the 40-49 age category who do not have underlying health conditions/comorbidities? We've found a range of related statistics from the CDC but none that specifically break out age and no underlying conditions.

Have a great weekend!

Stanley

Hi Liz,

No problem. The answer is **yes** – and I would say any new rumor/mis or disinformation likely contributes to overall vaccine hesitancy and refusal.

Unfortunately we don't yet had data for the school year that would be 2019-2020 (or 2020-2021) to see how sentiments around COVID-19 vaccine might affect general vaccine hesitancy.

Thanks,
Kristen

Hi Carol,

For tomorrow's call, we'd love to bring in the CrowdTangle team to highlight how they are evolving the use of their tools to help gather insights on emerging trends and conversations specifically around the COVID-19 vaccine. We think it would be useful to have the Census team join in based on last week's discussion, but definitely defer to you here. What we're proposing is:

I wanted to highlight that their team will be presenting so it would be great if folks were able to join via computer for this one. We'd be happy to use whichever VS option works best on your side for this.

Thanks,
Chelsey

We were thinking a COVID-19 specific Crowd Tangle demo could be good if they do join. A version 2...more focused.

Chelsey can share more thoughts on what that could be and we can decide. I think it would be helpful for them/broader call.

Best,

Payton

COVID-19 State of Vaccine Confidence Insights Report

Report 2 | March 1, 2021 | Date Range: January 31, 2021 – February 13, 2021

Summary

There continue to be widespread challenges and confusion with COVID-19 vaccine rollout in the U.S., which undermines vaccine confidence and threatens vaccine acceptance. Consumers are confused about how COVID-19 vaccines work and their relative effectiveness, while people with high-risk underlying and acute medical conditions are concerned about vaccine safety and their eligibility to receive a vaccine. Although vaccine supply has expanded to retail pharmacy settings, consumers continue to face structural barriers to access. The Centers for Disease Control and Prevention (CDC) should continue to coordinate with states and jurisdictions to increase transparency, respond to gaps in information, and confront misinformation with evidence-based messaging to increase vaccine confidence more broadly.

Contents

- 3 Consumers are confused about how COVID-19 vaccines work and their benefits.
- 3 People with underlying medical conditions, acute medical conditions, or allergies are unsure if current vaccines are safe for them.
- 4 Barriers to vaccine access remain, despite national expansion to retail pharmacy administration sites.
- 5 Emerging Topics
- 5 People are confused about their risk for COVID-19 before vaccine series completion.
- 5 Recruitment of children for vaccine trials met with concern and fear.
- 5 Scams are emerging across the U.S., targeting consumers trying to be vaccinated.
- 5 Closed-network social media platforms gaining traction with anti-vaccine supporters.
- 6 Continuing Themes
- 7 Appendix

Aims and Methods

By rapidly reviewing and analyzing numerous sources and inputs (see Appendix), the biweekly COVID-19 State of Vaccine Confidence Insights Report emphasizes major themes influencing COVID-19 vaccine hesitancy and uptake, categorized by their level and type of threat to vaccine confidence, degree of spread, and directionality. By examining how consumers think and feel, social processes, and the practical issues around vaccination, the Insights Report seeks to identify emerging issues of misinformation, disinformation, and places where intervention efforts can positively impact vaccine confidence across the U.S.

The information in this report is a snapshot and certain populations may be underrepresented. Images and quotes are illustrative examples and are not meant to be comprehensive of all content related to the highlighted themes.

Theme Classification

How do you classify this theme/information?		
High risk	Moderate risk	Low risk
<ul style="list-style-type: none"> May lead to vaccine refusals and decreased uptake Wide reach, pervasive 	<ul style="list-style-type: none"> Potential to trigger hesitancy to vaccinate Moderate reach, modest dissemination 	<ul style="list-style-type: none"> Concerning, but low risk to vaccine confidence Limited reach, limited dissemination
How has this theme/idea changed over time (since last report or over the course of multiple reports)?		
 <p>increasing Information spreading rapidly</p>	 <p>stable Information remaining constant at prior level</p>	 <p>decreasing Information is not gaining further traction and there has been no indication of additional activity</p>

Major Themes

Consumers are confused about how COVID-19 vaccines work and their benefits.

Consumers are confused about how COVID-19 vaccines work,¹ the impact of vaccination on asymptomatic spread,² how many doses they need if they previously had COVID-19 illness,³ and whether they will need to get vaccinated each year.⁴ Social media discussion and media coverage of vaccine effectiveness and efficacy are second only to conversations about accessing vaccination appointments, with 14% of the total conversations on COVID-19 vaccines online focused on vaccine effectiveness. Media coverage consistently includes statistics describing effectiveness of the available vaccines, with no information about how the public should interpret the statistics. Consumers need additional information to better manage their expectations for how COVID-19 vaccines work.⁵

Additionally, media coverage of new studies looking at VE of a single dose of mRNA vaccines is increasing.^{6,7} As social media conversation about unpleasant common side effects after the second dose of mRNA vaccines also increases, this type of coverage may persuade consumers that they either do not need a second dose or that the benefits do not outweigh the risk of experiencing side effects.⁸

Short-term recommendations

- Clarify messaging about vaccine effectiveness and efficacy, including how it is determined, what it means, and how consumers should interpret the vaccine effectiveness statistics in media headlines.
- Partner with healthcare providers to better understand which questions patients have regarding vaccine effectiveness and expand tools to assist providers in ongoing patient education.

Long-term recommendation

- Conduct research to better understand why consumers did not complete COVID-19 vaccine series and describe the wide array of barriers to completing COVID-19 vaccination.

People with underlying medical conditions, acute medical conditions, or allergies are unsure if current vaccines are safe for them.

Consumers are confused about whether people with underlying or high-risk medical conditions, such as cancer, or heart disease, or Down syndrome should or should not get a COVID-19 vaccine. Many believe that vaccination will cause illness and is unsafe, given their underlying condition. Compounding this misinformation, states and jurisdictions define “high-risk medical condition” differently, and generally lack clarity on where to find the lists of accepted underlying conditions for vaccination.⁹ This could affect the ability of those with underlying conditions to access the vaccine. High rates of media requests to CDC seeking to understand the underlying conditions eligible for vaccine prioritization and increased web queries on vaccination for those with a variety of conditions, underscore the public’s desire for credible information.

Caller has lupus, and wants to know how the vaccine will affect her immune system? She also has other high-risk medical conditions.

- CDC-info caller, 2/8

Consumers are also concerned that known allergies and factors such as acute illness, recent surgery, or taking antibiotics or other medications might prevent them from getting vaccinated, with 1,200 inquiries per week on the topic to CDC-INFO. Many with autoimmune disorders or suppressed immune systems, including HIV, are concerned that their bodies will not develop a significant immune response to the vaccine and that they will not be protected against COVID-19, or that the vaccine will make them increasingly ill.¹⁰

Short-term recommendation

- Address the information gap around underlying conditions, acute medical conditions, allergies, medications, and vaccine safety. Populate evidence-based, trusted websites with comprehensive and transparent information on what is known about health conditions and vaccine safety. Consider launching screeners or chat-bots to further fill these information gaps.

Long-term recommendations

- Collaborate with states to ensure “high-risk medical conditions” are defined clearly and consistently and that the conditions included in the high-risk category are listed and easy to locate on state websites and other state-level communication materials about vaccination eligibility.
- Partner with advocacy organizations and specialty healthcare organizations to reach out to people with disabilities and high-risk groups directly to ensure they are aware that they are eligible for vaccination and develop messaging to promote vaccination as appropriate.

Barriers to vaccine access remain, despite national expansion to retail pharmacy administration sites.

Although the Federal Retail Pharmacy Program sought to expand access to COVID-19 vaccines,¹¹ consumers report that scheduling or appointment systems are difficult to navigate; many consumers cannot secure appointments or find nearby vaccination locations.¹² Social media mentions and media

interest in the pharmacy program increased over the reporting period, with reporters seeking to understand how pharmacies were selected and how vaccine doses were allocated. Questions are consistently raised about why large-scale vaccination sites are closed due to vaccine supply problems, but pharmacies continue to receive vaccine doses. Some news outlets are reporting that vaccine supply initially earmarked for hospitals is now being rerouted to mass vaccination clinics and pharmacies to increase vaccination coverage, which has led to appointment cancellations.¹³

Additionally, consumers’ concerns about eligibility and vaccine allocation are increasing as the media highlights reports of a doctor losing his job after giving away excess doses prior to expiration¹⁴ and vaccines being seized after doses were mistakenly administered to non-eligible teachers.¹⁵ Pharmacies also report different plans for how to use excess doses before they expire, with some pharmacies allocating them to their staff and others developing wait lists of prioritized individuals.¹⁶

**Short-term recommendations**

- Develop clear, transparent messaging about how the Federal Retail Pharmacy Program operates; outline the process by which vaccines are allocated to pharmacies and other administration sites.
- Work with states and jurisdictions to develop systems to assist consumers with limited internet access with scheduling appointments and identifying the locations of vaccine administration sites.
- Collaborate with retail pharmacy partners and states/jurisdictions to develop clear communication plans for scheduling appointments through the Federal Retail Pharmacy Program

Long-term recommendation

- Use geospatial mapping to identify where to increase vaccine supply allocations to ensure equitable access to high-burden populations.

Emerging Topics

People are confused about their risk for COVID-19 before vaccine series completion.

- An uptick in media inquiries, web traffic, and social media listening platforms indicates uncertainty among consumers about what they should do if they are exposed to COVID-19 after the first dose of vaccine and whether they should proceed with getting their second vaccine dose.

Short-term recommendation

- Create clear communication materials regarding what to do if you are exposed to COVID-19 during the vaccination series

Recruitment of children for vaccine trials met with concern and fear

Consumers are expressing deep concern about clinical trials for COVID-19 vaccines involving children. Social media posts have compared the trials in children to child abuse,¹⁷ noted that vaccination should be unnecessary for this group as their transmission of the virus is low,¹⁸ and expressed that even if a COVID-19 vaccine were approved, parents would not allow their children to be vaccinated.¹⁹

Short-term recommendation

- Coordinate with FDA, state and local health departments, and professional organizations to develop messaging about how clinical trials in children work and why they are necessary.

Long-term recommendation

- Conduct research to better understand parents' fears and hesitations, specifically related to COVID-19 vaccines for children.

Scams are emerging across the U.S., targeting consumers trying to be vaccinated.

- Reports of fake vaccine being sold,²⁰ people receiving calls to schedule them for fake vaccination appointments,²¹ and individuals targeting seniors on Craigslist and Facebook seeking to pose as "caregivers" for them in order to get vaccinated before they are eligible.²²

Short-term recommendation

- Encourage states and jurisdictions to develop messaging informing consumers how to verify that their vaccination appointment is legitimate and what scheduling appointments should look like, including what information the consumer will need to show the vaccine provider to receive the vaccine.

Closed-network social media platforms gaining traction with anti-vaccine supporters.

- Vocal vaccine deniers and conspiracy theorists who previously used mainstream social media have been switching to closed-network social media apps.²³ Misinformation about COVID-19 vaccines has begun to circulate on this platform before moving to mainstream social media platforms with posts receiving tens of thousands of user views before they can be removed.²⁴

Short-term recommendations

- Partner with trusted messengers to communicate accurate, evidence-based information on closed messaging platforms and boost messages related to vaccine benefits and safety.
- Continue to monitor activity in these closed messaging groups, and partner with companies in fact-checking efforts to support rebuttal or removal of harmful mis/disinformation.

Continuing Themes

Themes below have been noted in Report 1 and continue to undermine vaccine confidence. For additional context and previous recommendations on these themes see Insights Report 1 (February 12, 2021).

- **Vaccine Adverse Event Reporting System (VAERS) and adverse events.** Misinformation about VAERS continues, along with fear about adverse vaccine effects. Although recently published VAERS data showed very low levels of severe adverse events,²⁵ media and the public continue to amplify deaths following vaccination and other potential reactions.
- **Nonsteroidal anti-inflammatory drugs (NSAIDs).** A recent study found that NSAIDs “reduced both the antibody and pro-inflammatory cytokine response to SARS-CoV-2 infection,” which may indicate NSAIDs impact the body’s response to vaccination.²⁶ Confusion about the effect of NSAIDs on vaccine effectiveness is expanding to other over-the-counter medications, like acetaminophen, pseudoephedrine, and naproxen. *New recommendations:*
 - Clarify what is known about the impact of NSAIDs and other medications on vaccine effectiveness.
 - Expand messaging about what types of medications can be taken after vaccination.
 - Provide healthcare providers and other trusted messengers with additional information on helping patients to manage common side effects.
- **Pregnancy and vaccination.** Anti-vaccine supporters continue to target pregnant women with dis- and misinformation, distorting information around miscarriage risks. Many women are turning to pregnancy forums for discussion. *Additional recommendation:*
 - Partner with websites and organizations that host pregnancy discussion boards to identify information gaps and address them.
- **Prioritization.** Sentiment has grown that willingness to reopen schools is in contradiction with teachers’ general lack of vaccine eligibility. Social media discussions and media coverage related to teacher eligibility accounted for 17% of all eligibility or prioritization conversations with 111,000 mentions. Only 24 states currently list teachers as eligible for vaccination.
- **Side effects.** Consumers are expressing concern about general side effects, long-term side effects, severe allergic reactions, and feeling ill after receiving the vaccine.
- **Lack of equity.** There is a lack of perceived equity in the vaccine prioritization process, and consumers continue to be frustrated about varied eligibility criteria and shifting guidelines.
- **Post-vaccination care.** Confusion about post-vaccination mitigation measures is continuing, including CDC’s new quarantine guidance for those who are fully vaccinated. *New recommendations:*
 - Clarify consumer-facing messages about post-vaccination quarantine guidelines.
 - Integrate post-vaccination mitigation messaging into vaccine-related communication products and messaging.

Hi Irene,

Nice to hear from you! Man, the summit feels like years ago. I imagine COVID-19 has kept you busy!

So, Mafindo will be best placed to speak about the Indonesia project—we're in intervention development mode!

Meanwhile, I've been leading the Vaccine Confidence Team and our Insights Unit at the COVID-19 Vaccine Task Force at US CDC. I've been drowning in domestic-focused work, but something that is new and exciting is that we have an Insights Unit that publishes on a biweekly basis the latest questions, concerns, and misinformation we're tracking in the US. Take a look:

<https://www.cdc.gov/vaccines/covid-19/vaccinate-with-confidence.html#reports>

We're also in process of hiring Vaccine Demand Strategists across the US that will help state and jurisdictional health departments track and address misinformation, an American version of infodemic managers, as it were, with some additional risk comms, behavioral science, community engagement, and social listening skills. Health departments are overwhelmed with the work they need to build vaccine confidence and address misinformation, and this was one way to tackle this problem.

Let me know if you're interested in talking to Jess and Chris, the Insights Unit co-leads and I'll connect you. Everyone from highest levels of USG, G-7, and even the Africa Infodemic Response alliance have been able to use the report insights to address vaccine misinformation more effectively. (I have heard rumors that an AIRA equivalent will be sprouting in WHO WPRO region, which would be very exciting.)

If you want someone extremely cool, we can put you in touch with the Office of Surgeon General, they released an advisory on health misinformation. This is the same office that puts out warnings about smoking and alcohol and drugs—it's a big deal that health misinformation has been labeled harmful to public health in this way. Here's the report: <https://www.hhs.gov/sites/default/files/surgeon-general-misinformation-advisory.pdf> Dr. Vivek Murthy is an incredible speaker too.

Oh! One more: #thisisourshot – activating medical and healthcare voices in the misinformation tsunami to push back about misinformation and explain evolving science more transparently, spearheaded by a Californian medical doc: <https://thisisourshot.info/> (also in Spanish, because we see big differences in language and different types of misinfo spreading in English vs Spanish).

So we may have been a teeny bit busy since September. ☐

Let me know if any of that sounds interesting and I'll hook you up.

Hope all has been well with you!

Sincerely,

Elisabeth Wilhelm *(she/her)*

Hi Elisabeth,

How are you? We are back preparing for the APAC Trusted Media Summit and I wanted to check in and see if there were any updates to the program you were recruiting for last year? Or something related to lessons learned?

We'd love to have you back to speak on the program and learnings, or if you have suggestions about who you think would be a great speaker (or panel), we'd love your advice!

Many thanks!

Irene

Hey Elisabeth,

Super excited to hear your presentation during the event!
As mentioned you will have to standby by 10AM SGT, and i will drop you a whatsapp prior, if you havent!
I realised i can get your number from your sign off - so no worries there.

I'll also send you a calendar invite for this event :-)

Thanks!

Hi Elizabeth!

Obtained by America First Legal Foundation through litigation.

I am Chelsea, and as Irene has mentioned, I will be coordinating your recording session. Super excited to have you onboard with us for this year's Trusted Media Summit!

As for the recording session itself, it will be a 40-minute slot. I will need your help to fill up a slot of your preference on the [Schedule](#)

[sheet](#). However, if all of the timings are not favourable for you, please reach out to me again to arrange for a suitable time.

Apart from that, we will build your Speaker biography as well, so I will need your bio to be filled up [here](#) under

your name (as indicated on the first column).

Please let me know if you have any questions. Looking forward to speaking with you soon!

Obtained by America First Legal Foundation through litigation.

Thank you

Thanks very much for registering for the APAC Trusted Media Summit, and for volunteering to give a lightning talk.

Obtained by America First Legal Foundation through litigation.

"US CDC is collaborating with UNICEF, WHO and IFCN member and leading civil society organization Mafindo on implementation

research designed to understand intersection between

COVID-19, misinformation, immunization attitudes and acceptance of a future SARS-COV-2 vaccine. We will be using human-centered design approaches to co-develop a social inoculation intervention designed to increase self-efficacy in identifying, addressing

and mitigating the infodemic."

Obtained by America First Legal Foundation through litigation

In fact, we found your topic so interesting that we'd love for you to give a 10-minute keynote on the second day, Oct 2. It would open the day's events. Due to the time difference,

we could pre-record your keynote to ensure there aren't

any technical difficulties. Then, if you are willing, we could do a live Q&A (it would be a bit late, probably around 10:20PM your time) after from the audience. If you prefer just to stick to the keynote, we could just pre-record that part and leave out the

Q&A.

Obtained by America First Legal Foundation through litigation.

If you are willing to record this talk, I have included my colleague Trinna Leong, who will help organize the content of the talk, and Chelsea and Joie who will support the logistics of recording.

Obtained by America First Legal Foundation through litigation.

Many thanks in advance!

Subject: RE: Invitation to speak: APAC Trusted Media Summit 2020

Hi all,

Just wanted to interject for some clarity since Lis is out of the office. The COVID-19 State of Vaccine Confidence Insights focus on the US and while we do send the reports to global partners, we do not know how they are implementing actions from these reports or using them. We know that our reports and methodology have provided some guidance for the weekly reports that the [African Infodemic Response Alliance](#) puts out, but our reports themselves do not inform them or their reports directly. As you all know mid/disinformation knows no geographical bounds, so our reports are likely utilized by our global partners in different ways (we are actively

disseminating an evaluation survey now). For some countries, as we highlight emerging information gaps and mis/disinformation they are able to prepare pre-bunks/interventions to reduce their community's vulnerability to such misinformation while other countries that are just beginning to roll out vaccines are able to look back at the vaccine challenges we have faced in the United States in our early stage of roll out. Anecdotally, we have heard from some countries with familial ties to people living in the US who have had their family spread misinformation to them based on what is spreading in the US.

Let me know if you have any questions!

Thanks,

Jess

Thanks so much, Elisabeth (moving you to bcc to save your inbox while on holiday!)

Hi Jess and Chris, it is very nice to meet you!

We'd love to have you participate in the [2021 APAC Trusted Media Summit](#) and share your work, particularly how international audiences are using the insights reports! To give you context, the APAC Trusted Media Summit is a virtual event brings together journalists, academics and NGOs involved in fact-checking and fighting misinformation across Asia-Pacific and kick off a year of ongoing virtual activities for the fact-checking community in the region. This is our fourth year running this event - last year, we brought together 732 journalists, academics, verification experts and policymakers from 28 countries, offered in 10 languages. If you are willing to present, we'd love for you to pre-record your talk (so we can subtitle) and then possibly be available for live Q&A, either on camera (if you don't mind the early call) or via chat offscreen. The timing is awful for the US (Sept 29-30, 4-6PM SGT/ 4-6AM EDT), so if that isn't possible, no worries at all.

You can see our videos from last year [here](#). (Note that the event is under Chatham House Rule, only those who consent had their videos publicly published. Some, like Elisabeth's talk, are only available via password for registered participants.

If you think you would be able to participate, please meet my colleagues [@Trinna Leong](#) and [@Joie Goh](#), who are co-running the event with me. They will follow up with details on the recording session!

Many thanks in advance,

Irene

Subject: Re: Invitation to speak: APAC Trusted Media Summit 2020

Hi Elisabeth,

Thank you so much for all the incredible suggestions! Honestly, I'd love any and all of these suggestions, if I can impose on you. Comments inline!

So, Mafindo will be best placed to speak about the Indonesia project—we're in intervention development mode!

Do you know if there will be a third round of the infodemic manager training? Or is there someone who can talk about lessons learned with that project?

Meanwhile, I've been leading the Vaccine Confidence Team and our Insights Unit at the COVID-19 Vaccine Task Force at US CDC. I've been drowning in domestic-focused work, but something that is new and exciting is that we have an Insights Unit that publishes on a biweekly basis the latest questions, concerns, and misinformation we're tracking in the US. Take a look: <https://www.cdc.gov/vaccines/covid-19/vaccinate-with-confidence.html#reports>

We're also in process of hiring Vaccine Demand Strategists across the US that will help state and jurisdictional health departments track and address misinformation, an American version of infodemic managers, as it were, with some additional risk comms, behavioral science, community engagement, and social listening skills. Health departments are overwhelmed with the work they need to build vaccine confidence and address misinformation, and this was one way to tackle this problem.

Let me know if you're interested in talking to Jess and Chris, the Insights Unit co-leads and I'll connect you. Everyone from highest levels of USG, G-7, and even the Africa Infodemic Response alliance have been able to use the report insights to address vaccine misinformation more effectively. (I have heard rumors that an AIRA equivalent will be sprouting in WHO WPRO region, which would be very exciting.)

I'd love if Jess or Chris might be able to give a talk about the insight reports and how they are being used, around the world!

If you want someone extremely cool, we can put you in touch with the Office of Surgeon General, they released an advisory on health misinformation. This is the same office that puts out warnings about smoking and alcohol and drugs—it's a big deal that health misinformation has been labeled harmful to public health in this way. Here's the report:

<https://www.hhs.gov/sites/default/files/surgeon-general-misinformation-advisory.pdf> Dr. Vivek Murthy is an incredible speaker too.

I'd love to get in touch with the surgeon general's office - I think it would be absolutely incredible to hear Dr. Murthy talk about health misinformation, why it is a public health issue. It would be especially meaningful since he has spoken about how COVID has affected his family both in the US and abroad.

Oh! One more: #thisisourshot – activating medical and healthcare voices in the misinformation tsunami to push back about misinformation and explain evolving science more transparently, spearheaded by a Californian medical doc: <https://thisisourshot.info/> (also in Spanish, because we see big differences in language and different types of misinfo spreading in English vs Spanish).

I love this! Is there someone who can speak to this project?

So we may have been a teeny bit busy since September. 😊

Let me know if any of that sounds interesting and I'll hook you up.

Thanks a million!!

Hope all has been well with you!

Sincerely,

Elisabeth Wilhelm (*she/her*)

Hi Elisabeth,

How are you? We are back preparing for the APAC Trusted Media Summit and I wanted to check in and see if there were any updates to the program you were recruiting for last year? Or something related to lessons learned?

We'd love to have you back to speak on the program and learnings, or if you have suggestions about who you think would be a great speaker (or panel), we'd love your advice!

Many thanks!

Irene

Subject: Re: Invitation to speak: APAC Trusted Media Summit 2020

Hi Elisabeth,

Thank you so much for all the incredible suggestions! Honestly, I'd love any and all of these suggestions, if I can impose on you. Comments inline!

So, Mafindo will be best placed to speak about the Indonesia project—we're in intervention development mode!

Do you know if there will be a third round of the infodemic manager training? Or is there someone who can talk about lessons learned with that project?

Meanwhile, I've been leading the Vaccine Confidence Team and our Insights Unit at the COVID-19 Vaccine Task Force at US CDC. I've been drowning in domestic-focused work, but something that is new and exciting is that we have an Insights Unit that publishes on a biweekly basis the latest questions,

concerns, and misinformation we're tracking in the US. Take a look:
<https://www.cdc.gov/vaccines/covid-19/vaccinate-with-confidence.html#reports>

We're also in process of hiring Vaccine Demand Strategists across the US that will help state and jurisdictional health departments track and address misinformation, an American version of infodemic managers, as it were, with some additional risk comms, behavioral science, community engagement, and social listening skills. Health departments are overwhelmed with the work they need to build vaccine confidence and address misinformation, and this was one way to tackle this problem.

Let me know if you're interested in talking to Jess and Chris, the Insights Unit co-leads and I'll connect you. Everyone from highest levels of USG, G-7, and even the Africa Infodemic Response alliance have been able to use the report insights to address vaccine misinformation more effectively. (I have heard rumors that an AIRA equivalent will be sprouting in WHO WPRO region, which would be very exciting.)

I'd love if Jess or Chris might be able to give a talk about the insight reports and how they are being used, around the world!

If you want someone extremely cool, we can put you in touch with the Office of Surgeon General, they released an advisory on health misinformation. This is the same office that puts out warnings about smoking and alcohol and drugs—it's a big deal that health misinformation has been labeled harmful to public health in this way. Here's the report: <https://www.hhs.gov/sites/default/files/surgeon-general-misinformation-advisory.pdf> Dr. Vivek Murthy is an incredible speaker too.

I'd love to get in touch with the surgeon general's office - I think it would be absolutely incredible to hear Dr. Murthy talk about health misinformation, why it is a public health issue. It would be especially meaningful since he has spoken about how COVID has affected his family both in the US and abroad.

Oh! One more: #thisourshot – activating medical and healthcare voices in the misinformation tsunami to push back about misinformation and explain evolving science more transparently, spearheaded by a Californian medical doc: <https://thisourshot.info/> (also in Spanish, because we see big differences in language and different types of misinfo spreading in English vs Spanish).

Subject: Re: Ivermectin Questions for the CDC

Good afternoon, Carrie and Liz,

I received the following response from a CDC Chief Medical Officer for the covid-19 response. It's long (includes citations) so I am putting my text in purple to differentiate it. Please let me know if you need anything else!

Catherine

(b)(4)

These responses are based on the independent advice of two national bodies of infectious diseases SME's expert in the treatment of COVID-19: NIH and the IDSA,

which have opined that there are not data that indicate ivermectin is effective in the ways described above.

NIH COVID-19 Treat Panel: [Ivermectin | COVID-19 Treatment Guidelines \(nih.gov\)](#)

Recommendation

- There is insufficient evidence for the COVID-19 Treatment Guidelines Panel (the Panel) to recommend either for or against the use of ivermectin for the treatment of COVID-19. Results from adequately powered, well-designed, and well-conducted clinical trials are needed to provide more specific, evidence-based guidance on the role of ivermectin in the treatment of COVID-19.

Infectious Diseases Society Of America (IDSA):

<https://www.idsociety.org/practice-guideline/covid-19-guideline-treatment-and-management/>, scroll down to “Recommendations 20-21: Ivermectin”

Recommendations (*Section last reviewed and updated 8/10/2021, Last literature search conducted 7/31/2021*)

- Recommendation 20: In hospitalized patients with COVID-19, the IDSA panel suggests against ivermectin outside of the context of a clinical trial. (Conditional recommendation, very low certainty of evidence)
- Recommendation 21: In ambulatory persons with COVID-19, the IDSA panel suggests against ivermectin outside of the context of a clinical trial. (Conditional recommendation, very low certainty of evidence)

I've got 2 answers but looks like its going to be tomorrow on other two. If this is not enough context and we need SMEs on a call, let me know

1. We currently remove content that claims COVID-19 is no more dangerous to people than the common flu or cold.

(b)(4)

(b)(4)

2. We currently remove content that claims that the mortality rate of COVID-19 is the same or lower than seasonal influenza.

Hi Carol,

I have a few more rounds of questions from our misinfo policy team.

A few of them are straightforward, but the others could require some more nuance, which may be easier over a call early next week with the right folks on the horn.

Here's what we've got:

1. We currently remove content that claims COVID-19 is no more dangerous to people than the common flu or cold.

(b)(4)

2. We currently remove content that claims that the mortality rate of COVID-19 is the same or lower than seasonal influenza.

(b)(4)

3. We currently remove content that claims that COVID-19 vaccines are not effective in preventing COVID-19.

(b)(4)

4. The CDC [website](#) says: “COVID-19 vaccines are effective at preventing infection, serious illness, and death.”

(b)(4)

Subject: Re: Regular Facebook meetings - need to change times

Calendar invite has changed! :)

Carol,

One item that came up was the status of the misinformation workstream discussions. I know that the Census item was a part of discussions on your side and there may be an update. Just trying to understand the status of that work.

I know you wanted to wait until you had more people available to focus more concretely on

(b)(4)

Or do you already know what is possible based on your discussions?

**The topic of COVID-19 misinfo came up at the very top of every discussion with the Biden team over the last months.

Best,

Payton

This piece has been posted, FYI.

[Myths and Facts about COVID-19 Vaccines | CDC](#)

Can receiving a COVID-19 vaccine cause you to be magnetic?

No. Receiving a COVID-19 vaccine will not make you magnetic, including at the site of vaccination which is usually your arm. COVID-19 vaccines do not contain ingredients that can produce an electromagnetic field at the site of your injection. All COVID-19 vaccines are free from metals such as iron, nickel, cobalt, lithium, and rare earth alloys, as well as any manufactured products such as microelectronics, electrodes, carbon nanotubes, and nanowire semiconductors. In addition, the typical dose for a COVID-19 vaccine is less than a milliliter, which is not enough to allow magnets to be attracted to your vaccination site even if the vaccine was filled with a magnetic metal.

Learn more about the [ingredients](#) in the COVID-19 vaccinations authorized for use in the United States.

Thanks so much, Carol. And yes, I've definitely noted that you wanted to check these answers with others on your team to confirm responses.

Also, I meant to ask in my email earlier, but I recall it was either you or Sam mentioning that you could share a transcript from Dr. Walensky's testimony last week where she touched on the question of whether COVID-19 could be man-made; is that something that you have handy and are able to share?

Many thanks again,

Liz

They want to see what you guys proactively have removed that might not be in those reports (but maybe it all is?). My guess is a short meeting with Lis Wilhelm vaccine confidence team is what is needed if FB is willing to do it. Doesn't seem to me like it should be part of the WH/HHS meeting.

To: Crawford, Carol Y. (CDC/OD/OADC) (b)(6) Chelsey Lepage (b)(6)
Subject: Re: Themes that have been removed for misinfo

It wasn't a report, but rather a discussion. We are setting up a meeting with WH/HHS to discuss more likely later this week or early next. Perhaps a CDC rep could participate or HHS share out.

Let me know what you are thinking.

Best,

Payton

Hope all is well too. I plan to join and listen in to the 3:30 meeting, FYI.

I added this part in yellow to our chain on turn.io so you probably missed it, did you have thoughts on how we can regularly meet with Census? I will also check back with others to see if they have other Qs that that were unanswered and get back to you.

So in follow up to today's meeting -- besides discussing things in more depth next Thur, am I correct that your team is going to consider how you might want to engage with the CDC/Census team routinely and get back to us? I'd be fine with using our existing time for this regular discussion if that end up working out best. I don't quite have a good vision yet on how it will work but I know you all have experience with Census already.

I just realized the SME is out this week so I'm going to have to verify the time Monday.

Also, coincidentally, I had this half typed to send up to you on VAERS. If of use, we just published a new video and I've attached some recent talking points that may also inform your efforts. We also plan to get some related myth's posted to our website.

Hi Carol,

Our Health Policy folks would like to meet with your VAERS experts (b)(4)
(b)(4)

We have a few folks based in Singapore that would need to attend, so hoping an **11am , Friday August 27th** timeframe would work for you / any of your SMEs who you think should join.

Would that work for you?

CA

Subject: WY issue

The Wyoming Dept. of Health mentioned to one of our groups that the algorithms that Facebook and other social media networks are apparently using to screen out postings by sources of vaccine misinformation are also apparently screening out valid public health messaging, including WY Health communications. They were looking for advice about how to work with social media networks to ensure that verifiable information sources are not blocked.

Do you have someone that could perhaps talk to the state about this?
